

Royal Jordanian Medical Society
Paediatric Surgery Workshop and Conference

20th October – 2nd November 2018

Professor Paddy Dewan and Dr Padma Rao

A project funded by the Kind Cuts for Kids charity, and supported by the Royal Jordanian Medical Society and Queen Rania Al Abdullah Hospital for Children.

Introduction

The visit to Jordan eventuated from an invitation from the Royal Jordanian Medical Society for Professor Paddy Dewan to participate as the keynote lecturer for the 9th Annual congress, to be held at the Dead Sea in Jordan, with a surgical workshop planned for the three days prior to the conference commitments. Contact with the Paediatric surgeons has been made during a similar visit to the Jordan University in 2016, since when Professor Ahmad Al Raymoony extended the invitation and coordinated the arrangements for what has been a very productive collaboration.

The timetable expanded to meet both the need and the opportunity for teaching and patient care, thus including Dr Padma Rao in the 32-patient clinic on Friday 26th October, then 3 days of telecast surgery, followed by the conference at the Deed Sea, during which three lectures by Professor Dewan were delivered in the two sessions devoted to the subspecialty. Two additional patients were reviewed.

During the 8 days, 34 patients were assessed clinically and plans developed with the large number of attending surgeons and trainees. Ten patients underwent an operation during which several surgeons were in a conference room watching the telecast operations that numbered a total of 39 separate procedure on 10 patients. Some of the clinic (left) and theatre staff are shown below.

Records show that in the 128 visits by Professor Dewan, there have been more than 6872 separate consultations, 2790 occasions on which patients have had surgery to have 4766 operative procedures, since 1993.

Do the two papers on urethral and/or penile duplication

Need the photos of the YD bladder neck reconstruction from Majed

Donation of DB ring

Diathermy adaption

Needle holders with worn feet

Us without images

MCU without urethrogram

Not the use of the term - colodynamic study as part of a distal loop-o-gram

neuropathic bladder Rx with lap reimplants! – Rakan

ureterodynamics - Rakan

DO THEY HAVE A UROLOGY XRAY MEETING.

Orthopaedic involvement in the bladder exstrophy and cloacal exstrophy work.

Radiologist in theatre

Clinical Work

A total 34 children were reviewed and 10 underwent surgery. All operated cases included two senior Jordanian Paediatric surgeons, and a number of people in the nearby auditorium, who were able to hear the ongoing commentary and provide input to the procedures.

Consultations

<u>Gender</u>	<u>DOB</u>	<u>Pathology</u>
<u>Male</u>	<u>1/1/2011</u>	<u>Traumatic urethral rupture</u>
<u>Male</u>	<u>12/1/2000</u>	<u>Bladder exstrophy/epispadias</u>
<u>Male</u>	<u>27/4/2015</u>	<u>Bladder exstrophy</u>
<u>Male</u>	<u>17/8/2006</u>	<u>POMU - rectal fistula</u>
<u>Male</u>	<u>17/2/2012</u>	<u>Ectopic Ureters</u>
<u>Male</u>	<u>16/1/2015</u>	<u>COPUM - good kidneys</u>
<u>Male</u>	<u>20/11/2011</u>	<u>Single kidney</u>
<u>Male</u>	<u>15/2/2012</u>	<u>Anorectal anomaly; urethral duplication</u>
<u>Male</u>	<u>1/1/2016</u>	<u>Anorectal anomaly; single kidney VUR</u>
<u>Male</u>	<u>1/10/2006</u>	<u>Epispadias - incontinence</u>
<u>Male</u>	<u>22/11/2012</u>	<u>COPUM - single hydro</u>
<u>Female</u>	<u>20/9/2006</u>	<u>Cloacal anomaly</u>
<u>Male</u>	<u>1/1/2009</u>	<u>Traumatic urethral rupture</u>
<u>Male</u>	<u>4/7/2012</u>	<u>COPUM - No R function</u>
<u>female</u>	<u>15/5/2002</u>	<u>Sacral agenesis</u>
<u>Male</u>	<u>17/8/2004</u>	<u>Bladder exstrophy/epispadias</u>
<u>Female</u>	<u>24/9/2015</u>	<u>PUJ obstruction</u>
<u>Male</u>	<u>1/1/2016</u>	<u>Vesicoureteric junction obstruction</u>
<u>Female</u>	<u>24/10/2002</u>	<u>Cloacal exstrophy</u>
<u>Male</u>	<u>1/1/2016</u>	<u>Bilateral inguinal hernia</u>
<u>Male</u>	<u>1/1/2014</u>	<u>Hypospadias</u>

Operative surgery

Of the 10 patients operated on, all were complex surgeries undertaken to resolve complex pathology of deal with problematic outcomes from previous intervention.

many had investigation as part of the procedure, and others had redo surgery for complex urology or anorectal anomalies. Noted lessons during the procedures included understanding of the reinterpretation of the anatomy of posterior urethral obstruction, catheterless ureteric reimplantation, urothelial lined bladder augmentation, resection of fistulous connection from the rectum to the urethra via a posterior approach, the use of caudal anaesthesia in urogenital surgery, anterior osteotomy for pelvic closure in bladder exstrophy, and perineal body reconstruction in redo anorectal anomaly surgery. Students of these lesions included, Paediatric surgeons, anaesthetist, surgical trainees and their interns, Urologists and a Paediatric orthopaedic surgeon.

<u>Gender</u>	<u>DOB</u>	<u>Operation</u>
<u>Male</u>	<u>27/4/2015</u>	<u>Bladder exstrophy redo</u>
<u>Male</u>	<u>22/11/2012</u>	<u>COPUM fulguration</u>
<u>Male</u>	<u>4/7/2012</u>	<u>COPUM fulguration</u>
<u>Male</u>	<u>12/1/2000</u>	<u>Cystoscopy</u>
<u>Male</u>	<u>17/2/2012</u>	<u>Cystoscopy</u>
<u>Male</u>	<u>15/2/2012</u>	<u>Cystoscopy</u>
<u>Male</u>	<u>22/11/2012</u>	<u>Cystoscopy</u>
<u>Male</u>	<u>4/7/2012</u>	<u>Cystoscopy</u>
<u>female</u>	<u>15/5/2002</u>	<u>Cystoscopy</u>
<u>Male</u>	<u>17/8/2004</u>	<u>Cystoscopy</u>
<u>Male</u>	<u>4/7/2012</u>	<u>Endoscopy via bladder</u>
<u>Male</u>	<u>17/2/2012</u>	<u>Endoscopy via Mitrofanoff</u>
<u>Female</u>	<u>24/10/2002</u>	<u>EUA abdomen</u>
<u>Male</u>	<u>15/2/2012</u>	<u>EUA Anus</u>
<u>Female</u>	<u>24/10/2002</u>	<u>Insertion of DJ stent</u>
<u>Male</u>	<u>27/4/2015</u>	<u>Omphalooplasty</u>
<u>Male</u>	<u>27/4/2015</u>	<u>Osteotomy - anterior left</u>
<u>Male</u>	<u>27/4/2015</u>	<u>Osteotomy - anterior right</u>
<u>Male</u>	<u>17/8/2006</u>	<u>Pena Anterior - fistula division</u>
<u>Male</u>	<u>15/2/2012</u>	<u>Perineal body reconstruction</u>
<u>Male</u>	<u>17/2/2012</u>	<u>urethral dilatation</u>
<u>Male</u>	<u>27/4/2015</u>	<u>Urethroplasty – partial</u>
<u>Male</u>	<u>15/2/2012</u>	<u>Urethroscopy</u>
<u>Male</u>	<u>12/1/2000</u>	<u>Urodynamics</u>
<u>female</u>	<u>15/5/2002</u>	<u>Urodynamics</u>
<u>Male</u>	<u>17/8/2004</u>	<u>Urodynamics</u>
<u>Male</u>	<u>27/4/2015</u>	<u>Wound revision</u>

Paediatric Urology – Jordan 2018

Clinical Case Examples

Case 1+2

Two of the boys reviewed had been born with bladder exstrophy; the 12 and 16 year old boys were incontinent of urine, but neither wants to have the alternative of bladder catheterization that is probably necessary for bladder control. IN both cases they were further investigated under anaesthetic that identified a large out-pouching from of the urethra, the closure of which would significantly improve their ability to hold urine. The first xray, below, shows a catheter into the bladder and reflux into each urethra; the second shows a second cavity below the bladder, the urethral diverticulum.

Case 3+ 4

A six and eight year old boy had been involved in separate road traffic accidents that has resulted in both the fracture of their pelvic and rupture of their urethra, producing the situation shown in the xray. Both boys had lived with a catheter into their bladder for many months, as there is no connection of the urethra, having been completely occluded by the accident.

Case 5

YB, the four year old boy mentioned in the introduction, presented at birth with an imperforate anus and the finding of two urethras for which he had a colostomy and an attempt at repair. Unfortunately, the repair, in a neighbouring country, had irreversibly damaged the urethra. The first of the endoscopic images is the point at which the urethra is seen to be blocked from below, the second is the inside of the bladder with the rudimentary connection to the bladder to the right which is the lesser of the two urethras; the main urethra having been completely occluded from the bladder neck to the level of the first image, which is at the base of the penis.

Sadly, the urethra could not be repaired, but fortunately, he was able to achieve an advantage from the Kind cuts for Kids international experience for his faecal continence. The option of further surgery for his anorectal anomaly was evident from the examination and history, leading to a procedure that repositioned the muscle around the rectum and anus, in a procedure that was minimal and involved operating through the perineum, without the need for a covering colostomy.

Case 6

Many KCFK's reports have included cases of redo bladder exstrophy; children who have been born with the inside of the bladder visible on the outside – first picture. Both Paediatric surgical and orthopaedic staff were involved in the application of an option that has been highly successful in many children around the world. The second image is just prior to the completion of the closure.
